

Migrate Eggplant DAI to Another Server

You can migrate a working version of Eggplant DAI server from one machine to another.

1. Install Eggplant DAI on the new server.
2. Stop the **Digital Automation Intelligence** service through the Windows Services manager.
3. From the existing location where Eggplant DAI is installed, open `C:\ProgramData\Eggplant\Digital Automation Intelligence`.
4. Take a backup of the **data** and **minio** folders and then copy them over to the same path in the new location.
5. Start the **Digital Automation Intelligence** service.
